Manual Testing: Using effective tools and skilled professionals ensure the delivery.

Automated Functional & Regression Testing WinRunner, SilkTest, RationalRobot, QuickTest, Test Complete Load Testing LoadRunner, SilkPerformer, WebLoad, OpenSTA White Box Testing Boundschecker, Purify, PureCoverage Unit Testing Jprobe, Junit Defect & Change Tracking ClearQuest, GNATS, Bugzilla, d-tracker, TeamTrack, SourceForge, Test Director, Visual Intercept GUI Testing Mercury WinRunner, Silk test Memory Leak Jprofiler Configuration Management CVS, VSS Project Management MS Project.

VIRTUALIZATION

AAAR has extensive experience in virtual consulting. All our staff use remote desktops to dial into our client Network VM (Virtual Machines) which are inside our client's networks via VPN (virtual private network). All our clients feel real safe this way since all their code and their proprietary information never leaves their network.

Developers/QA testers would use the local machine to just view the virtual machines and operate on the machines at the client site. This has worked well for us especially in clients where senior developers, senior QA folks are at the client site and the remaining members are here.

Virtualization can be viewed as part of an overall trend in enterprise IT that includes autonomic, a scenario in which the IT environment will be able to manage itself based on perceived activity, and utility computing, in which computer processing power is seen as a utility that clients can pay for only as needed. The usual goal of virtualization is to centralize administrative tasks while improving scalability and workloads.

Our core strengths have been to give virtual consultants to our clients on hourly rates.

MAINTENANCE

We do application management services viz are as follows:

- Application maintenance
- Error tracking and debugging
- Version upgrades and enhancements
- Comprehensive user support
- Helpdesk support
- Technical troubleshooting
- Performance monitoring
